

Mastering Dental Compliance: From Paper Chaos to Digital Efficiency

The Problem: The Manual Compliance “Time Suck”

The Regulatory Mandate

RCDSO and Public Health require accessible MLPs and SDSs for all workplace materials.

The Inefficiency of Paper Binders

Manual filing leads to outdated documents, fragmented storage, and hours of administrative waste.

Reactive vs. Proactive Preparedness

Paper systems cause “inspection scrambling” rather than maintaining constant, confident audit readiness.

The Solution: The Shift to Digital Management

Build a Centralized Digital Library

Organize documents into searchable folders by category.

Instant Accessibility & Search

Ensure documentation is instantly retrievable on tablets or computers for staff and inspectors.

Maintain “Significant New Data”

Update SDSs within 90 days when hazard classifications or safety precautions change.

Purpose: Four Primary Purposes of an SDS for Worker Safety

Identification

Product name and Canadian supplier contact information.

Hazards

Physical (fire/reactivity) and health hazard classifications.

Prevention

Steps for safe handling, storage, and exposure reduction.

Response

Protocols for first-aid, fire-fighting, and accidental release.
